

TELEMOTIVE'S LASER GUARD® COLLISION AVOIDANCE SYSTEM FOR CRANES

Features & Benefits

- Unique product application – offers an opportunity for new orders at every sales call.

- Unlike bumpers, Laser Guard® stops crane movement before a collision.

- Class 1 Laser system is field adjustable. Set the three contact points within a 10-ft to 150-ft protective range to reduce speed and stop the crane.

- Laser Guard® is self-monitoring. The degradation detector circuitry monitors the optical path and provides a fault output if it detects dirty optics, obstructions, misalignment, or if there is a failure in the laser head.

- Provides protection against both crane-to-crane and crane-to-wall collisions.
