SLTX Engineered Transmitter

Consult the factory when ordering a transmitter for an existing Telemotive System (i.e. 8000, 10K, 18K, and *inTeSmart* Systems)

Description	List Price
Zero levers and 6 auxiliary switches Unlicensed (part 15)	\$4,517
One lever and 4 auxiliary switches Unlicensed (part 15)	\$4,517
Two levers and 2 auxiliary switches Unlicensed (part 15)	\$4,517
Three levers and 1 auxiliary switch Unlicensed (part 15)	\$4,517
Four levers and 1 auxiliary switch Unlicensed (part 15)	\$4,792
Five levers and 1 auxiliary switch Unlicensed (part 15)	\$5,067
Six levers and 1 auxiliary switch Unlicensed (part 15)	\$5,342
Seven levers and 1 auxiliary switch Unlicensed (part 15)	\$5,617

Options

Description	List Price
Additional Auxiliary Switches: The base system includes an auxiliary function for the horn. Auxiliary functions include: single speed rotates, grabs, lights, bypasses, and other functions without multiple speeds. Any additional switches added to the transmitter may require additional relays in the system.	\$95
Licensed VHF (Part 90): If VHF is needed for longer distances or to interface to an existing VHF system (i.e. 8000 or 18K)	\$300
Licensed UHF (Part 15): If UHF is needed for longer distances or to interface to an existing UHF system (i.e. 8000 or 18K)	\$500
Conformal Coating: This feature is highly recommended for very humid environments. To prevent corrosion and extend the life of your radio control transmitter, this coating may be applied to all circuit boards.	\$395
Access Code Plug and Receptacle (per Receptacle): Transmitters are easily interchangeable with this plug. If multiple cranes have similar functions you can interchange the transmitters, thus reducing the need for additional spare transmitters.	\$310
Additional Access Code Plugs (per Code Plug)	\$155
Pitch and Catch: Allows two operators to efficiently move a load over a long bay. The radio transfer from one operator to another is seamless. One operator would pick up the load and send the crane down the bay to the other operator.	\$483
Crane Select: Allows an operator the ability to control multiple cranes from one transmitter. The receiver would only allow one transmitter to "work" the system on a first come first serve basis.	\$483

NOTES:

1-An additional 10% discount can be applied to the spare transmitter and all options on this page when purchased at the same time and as part of a new system.

(Example: Three levers and 1 auxiliary switch Unlicensed (part 15) \$4,517 + Crane Select \$483 [\$5,000] X .9 X Multiplier = Net Price)

2-Custom engraving is included with every engineered transmitter

3-When a Part 15 spare transmitter for a legacy system is purchased, it includes a filter and half wave antenna that will need to be added to the receiver in the field.

SLTX Engineered Transmitter

Optional Parts

Description	List Price
Alkaline Battery Pack (BT120-0): Disposable alkaline battery for the SLTX transmitter	\$29
Rechargeable 7.2V NiMH Battery six cell (BT122-0): Standard SLTX rechargeable transmitter battery.	\$79
Rechargeable 12.0V NiMH Battery ten cell (BT123-0): Only the high power SLTX 750mW licensed transmitter uses this rechargeable battery.	\$95
Battery Charger (E10759-0): Designed to recharge both the BT122-0 and the BT123-0 batteries. It comes with a 120 VAC power adapter.	\$395
Piggyback Battery Charger (E10759-1): The charger plugs into the E10759-0 battery charger without using additional AC outlets. Up to three charging units can be charged from one AC adapter.	\$295
Additional Manuals: Two manuals are included with the purchase of your system. Additional manuals available. You can obtain our current manual for free from our web site at www.magnetekmh.com .	\$45
